

ZM34 - Covert Mount Waste Pipe

This adapter is designed for modular cameras using an M20x1.5mm thread. The main purpose is to make a covert installation, but it also opens up many ways to mount a modular camera. Note that the mount is optimized to be covert. The image from some cameras may show (very small) dark corners.

The adapter makes it possible to mount the cameras using 40mm waste pipes and 1-1/2" plastic pipes (waste pipe and electrical conduits). By using angled joints, the direction of the camera may be adjusted in an easy way.

Cameras that fit are AXIS P1245/FA1105, F1005-E, P1214 and P1214-E.
